

**Amendments to the Claims**

1. (Withdrawn) A molded article comprising  
high molecular weight  $\alpha$ -1,4-glucan and/or its modification, and  
low molecular weight  $\alpha$ -1,4-glucan and/or its modification, wherein  
the low molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to  
180 and less than 620, and  
the high molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal  
to 620 and less than 37000.
2. (Withdrawn) A molded article according to Claim 1, wherein the low molecular  
weight  $\alpha$ -1,4-glucan has the degree of polymerization of greater than or equal to 180 and less  
than 560, and the high molecular weight  $\alpha$ -1,4-glucan has the degree of polymerization of greater  
than or equal to 680 and less than 37000.
3. (Withdrawn) A molded article according to Claim 1, wherein the low molecular  
weight  $\alpha$ -1,4-glucan has a molecular weight distribution of not greater than 1.25, and the high  
molecular weight  $\alpha$ -1,4-glucan has a molecular weight distribution of not greater than 1.25.
4. (Withdrawn) A molded article according to Claim 1, wherein the  $\alpha$ -1,4-glucans  
are enzyme-synthesized  $\alpha$ -1,4-glucan.
5. (Withdrawn) A molded article according to Claim 1, wherein the modification  
of the  $\alpha$ -1,4-glucans is a chemical modification selected from the group consisting of  
esterification, etherification and crosslinking.
6. (Withdrawn) A molded article according to Claim 1, wherein a weight ratio of  
high molecular weight  $\alpha$ -1,4-glucan and/or its modification : low molecular weight  $\alpha$ -1,4-glucan  
and/or its modification is within the range of 99:1 to 25:75.

7. (Withdrawn) A molded article according to Claim 1, wherein a weight ratio of high molecular weight  $\alpha$ -1,4-glucan and/or its modification : low molecular weight  $\alpha$ -1,4-glucan and/or its modification is within the range of 99:1 to 50:50.

8. (Withdrawn) A molded article according to Claim 1, wherein a weight ratio of high molecular weight  $\alpha$ -1,4-glucan and/or its modification : low molecular weight  $\alpha$ -1,4-glucan and/or its modification is within the range of 99:1 to 75:25.

9. (Withdrawn) A molded article according to Claim 1, wherein the molded article is film, sheet, coating, fiber, yarn, non-woven fabric, a food container, an edible container, a medical material, a medical device or a gelatinous molded article.

10. (Withdrawn) A molded article according to Claim 1, wherein the molded article is a contact-type food container which directly covers a surface of an agricultural product or a food product.

11. (Withdrawn) A molded article according to Claim 1, wherein the molded article is a hard capsule, a soft capsule or a seamless capsule.

12. (Withdrawn) A molded article according to Claim 1, wherein the molded article is a feed for an animal, a food or a food additive.

13. (Currently amended) A process for preparing a molded article comprising  
(i) high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof and  
(ii) low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof,

wherein the process comprises the step of:  
adding the low molecular weight  $\alpha$ -1,4-glucan and/or or its modification or a combination thereof to a solution comprising the high molecular weight  $\alpha$ -1,4-glucan and/or or its modification or a combination thereof to gel the solution, wherein

the modification of the  $\alpha$ -1,4-glucans is a chemical modification selected from the group consisting of esterification, etherification and crosslinking,

the low molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 180 and less than 620, and has a molecular weight distribution of not greater than 1.25 and,

the high molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 620 and less than 37000, and has a molecular weight distribution of not greater than 1.25.

14. (Currently amended) A process for preparing a molded article comprising

- (i) high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof and
- (ii) low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof,

wherein the process comprises the step of:

cooling a solution comprising the high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof and the low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof to gel the solution, wherein

the modification of the  $\alpha$ -1,4-glucans is a chemical modification selected from the group consisting of esterification, etherification and crosslinking,

the low molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 180 and less than 620, and has a molecular weight distribution of not greater than 1.25 and,

the high molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 620 and less than 37000, and has a molecular weight distribution of not greater than 1.25.

15. (Currently amended) A process for preparing a molded article comprising

- (i) high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof and

(ii) low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof,

wherein the process comprises the step of:

neutralizing an alkaline solution comprising the high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof and the low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof to gel the solution, wherein

the modification of the  $\alpha$ -1,4-glucans is a chemical modification selected from the group consisting of esterification, etherification and crosslinking,

the low molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 180 and less than 620, and has a molecular weight distribution of not greater than 1.25 and,

the high molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 620 and less than 37000, and has a molecular weight distribution of not greater than 1.25.

16. (Cancelled)

17. (Previously presented) A process for preparing a molded article according to Claim 13, wherein

the low molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 180 and less than 560, and has a molecular weight distribution of not greater than 1.25 and,

the high molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 680 and less than 37000, and has a molecular weight distribution of not greater than 1.25.

18. (Previously presented) A process for preparing a molded article according to Claim 16, wherein the  $\alpha$ -1,4-glucans are enzyme-synthesized  $\alpha$ -1,4-glucan.

19. (Cancelled)

20. (Currently amended) A process for preparing a molded article according to Claim 13, wherein a weight ratio of the high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof and the low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 25:75.

21. (Currently amended) A process for preparing a molded article according to Claim 13, wherein a weight ratio of high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof : low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 50:50.

22. (Currently amended) A process for preparing a molded article according to Claim 13, wherein a weight ratio of high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof : low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 75:25.

23-25. (Cancelled)

26. (Previously presented) A process for preparing a molded article according to Claim 14, wherein

the low molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 180 and less than 560, and has a molecular weight distribution of not greater than 1.25 and,

the high molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 680 and less than 37000, and has a molecular weight distribution of not greater than 1.25.

27. (Previously presented) A process for preparing a molded article according to Claim 15, wherein

the low molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 180 and less than 560, and has a molecular weight distribution of not greater than 1.25 and,

the high molecular weight  $\alpha$ -1,4-glucan has a degree of polymerization of greater than or equal to 680 and less than 37000, and has a molecular weight distribution of not greater than 1.25.

28-29. (Cancelled)

30. (Currently amended) A process for preparing a molded article according to Claim 14, wherein a weight ratio of the high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof and the low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 25:75.

31. (Currently amended) A process for preparing a molded article according to Claim 15, wherein a weight ratio of the high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof and the low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 25:75.

32. (Currently amended) A process for preparing a molded article according to Claim 14, wherein a weight ratio of high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof : low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 50:50.

33. (Currently amended) A process for preparing a molded article according to Claim 15, wherein a weight ratio of high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof : low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 50:50.

34. (Currently amended) A process for preparing a molded article according to Claim 14, wherein a weight ratio of high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof : low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 75:25.

35. (Currently amended) A process for preparing a molded article according to Claim 15, wherein a weight ratio of high molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof : low molecular weight  $\alpha$ -1,4-glucan and/or or its modification, or a combination thereof is within the range of 99:1 to 75:25.
